

## Drupal maintenance and Support Services

From **Atenea tech** we offer support services to **maintain, expand and improve** your website with Drupal. We put at your disposal an agile and easy to use ticketing tool, through which you can communicate your needs. We **resolve** your doubts, we **analyze** the task to be done, and before we start we offer an estimate of the time needed to complete it. Once completed we inform you of the effective time spent, so that you have total control over the costs of the service.

In **Atenea tech** we have more than 10 years of experience with **Drupal** and since then we have **analyzed, designed and developed web projects** for companies and organizations of all kinds. Our way of working is based on **agile methodologies**, which makes us a very versatile development team. That allows us to **adapt and grow in each project we carry out**, focusing our objectives on the needs of the client.

Evolutionary maintenance

Audit modules, topics and performance

Programming of custom modules
